### **Color In Double Stars Carbonar**

But most of the time, the colors are very pale. That stars should exhibit different colors is not surprising as a star's color is a function of its surface temperature, and stars show a wide range of surface temperatures. What can be surprising, however, is the contrast in color of two or more stars that comprise a system.

## **7. OBSERVING DOUBLE STARS**

For the brightest color, I use Araucana eggs, which are widely available at Whole Foods and farmer markets. The eggs have a greenish-blue tint to the shell and the hens that lay them are often fed marigolds which make the egg yolks intensely bright yellow-orange. Many recipes for carbonara include cream—I never add cream.

### **Spaghetti Carbonara | Martha Stewart**

Most double stars don't display much color, especially for novice observers. But Almaak is different. Like Albireo in the constellation Cygnus, the two visible component stars of Almaak show a splendid color contrast. The brighter is a K-type giant star that shines golden yellow, while its companion is a hot blue main-sequence star.

Pasta with carbonara sauce is a fundamentally simple and easy dish, made by coating pasta in a rich, creamy sauce of eggs, cheese, pork, and black pepper. The challenge is in combining the right ingredients for a sauce with a perfectly silky texture, and not accidentally scrambling those eggs in the process. Here's how to do it.

Binocular binary stars? - posted in Double Star Observing: Hi...my first post in the Double Star Observing forum! Two questions if I may:-1. Are there any binary stars (true binaries as opposed to optical doubles) within reach of 15x70mm binoculars? 2. If so, could you kindly suggest or point me to a modest list suited to a novice. Thanks in advance.

#### **Color in Double Stars - CARBONAR**

Color Contrast in Double Stars. by Mark Deprest Printed in Reflections: September, 1998. Revised: September 2001. Most often, colors are associated with binary stars. Binaries are stars that have formed in pairs, a common occurrence in nature, because human eyes are sensitive to contrast effects, subtle differences in the tints of these stars stand out when observed in a telescope.
