### **Comparative research - Wikipedia**

**Comparative case studies are undertaken over time and emphasize comparison within and across contexts. Comparative case studies may be selected when it is not feasible to undertake an experimental design and when there is a need to understand and explain how features within the context influence the success of program or policy initiatives (Goodrick, 2014).**

**The Advantage of Comparative Research | Viget**  
The design of a research topic explains the type of research (experimental, survey, correlational, semi-experimental, review) and also its sub-type (experimental design, research problem, descriptive case-study). There are three main types of research design: Data collection, measurement, and analysis.

**COMPARATIVE RESEARCH - Brandon University**  
A causal-comparative design is a research design that seeks to find relationships between independent and dependent variables after an action or event has already occurred. The researcher's goal is to determine whether the independent variable affected the outcome, or dependent variable, by comparing two or more groups of individuals.

### **Causal-Comparative Design - SAGE Research Methods**

Most comparative studies carried out in this vein set out to examine various national development patterns in order to find similarities and differences among comparable societies. An influential work here is Cyril Black's *Dynamics of Modernisation* (1967), which quite ambitiously provides a paradigm for doing comparative research.

In any event, it is of crucial importance before engaging in QCA proper (through csQCA, mvQCA, fsQCA) to develop a specific comparative research design. Naturally, developing a research design covers many other aspects than simply case and variable selection—but we choose to concentrate on these two operations because they are particularly crucial in comparative research designs.
