Example 11. How many grams of NH₃ will be produced when 33.9 mol of H₂ are reacted according to this chemical equation?. N₂ (g) + 3 H₂ (g) ? 2 NH₃ (g). Solution. The conversions are the same, but they are applied in a different order. Start by using the balanced chemical equation to convert to moles of another substance and then use its molar mass to determine the mass of the final ...

Chemistry: Challenges and Solutions - Annenberg Learner

The metallic elements in the periodic table located between the transition metals and the weakly nonmetallic metalloids have received many names in the literature, such as post-transition metals, poor metals, other metals, p-block metals and chemically weak metals; none have been recommended by IUPAC. The most common name, post-transition metals, is generally used in this article.
