The major goal of the Journal of Computational Methods in Sciences and Engineering (JCMSE) is the publication of new research results on computational methods in sciences and engineering. Common experience had taught us that computational methods originally developed in a given basic science, e.g. physics, can be of paramount importance to other neighboring sciences, e.g. chemistry, as technology and, in turn, to society as a whole.

Computational Methods in Engineering - 1st Edition
In many engineering applications such as structural mechanics, heat transfer and fluid dynamics numerical methods are employed to solve the governing partial differential equations. The numerical data is available at discrete points in the computational domain. It is then necessary to use numerical differentiation to evaluate or estimate derivatives.
