Concepts Management Science Donald J
In computer programming, a function or subroutine (when it doesn't return a value) is a sequence of program instructions that performs a specific task, packaged as a unit. This unit can then be used in programs wherever that particular task should be performed. Functions may be defined within programs, or separately in libraries that can be used by many programs.

Function (computer programming) - Wikipedia
J.S. Mill builds on Comte 1830-1842 to argue that social science is a branch of psychology. Society, according to Mill, is the aggregate of human minds, and the topic of the social sciences is to derive laws governing such aggregates.

Social Ontology - Stanford Encyclopedia of Philosophy
Natural resource management (NRM) is the management of natural resources such as land, water, soil, plants and animals, with a particular focus on how management affects the quality of life for both present and future generations (stewardship). Natural resource management deals with managing the way in which people and natural landscapes interact. It brings together natural heritage ...
