Here we will discuss about the types of joints commonly used for structural steel hollow sections. Hollow sections are of three types, Rectangular Hollow Sections (RHS) and Square Hollow Sections (SHS) and Circular Hollow Sections (CHS). Types of Joints and Their Detailing for Steel Hollow Sections. Following are the joint details for structural steel hollow sections (RHS and SHS) commonly used: 1. K - Type Joints:

A hollow structural section is a type of metal profile with a hollow cross section. The term is used predominantly in the United States, or other countries which follow US construction or engineering terminology. HSS members can be circular, square, or rectangular sections, although other shapes such as elliptical are also available. HSS is only composed of structural steel per code. HSS is sometimes mistakenly referenced as hollow structural steel. Rectangular and square HSS are also commonly c
