For example: see the code snipped below.

*Contents Class-ArcGIS Pro*  
Georeferencing is the process of spatially adjusting a CAD or Revit drawing without changing the original source data. In ArcGIS Pro, this is performed by assigning the proper projection file or using the control link points in the drawing to known geographic coordinates. Once you georeference your dataset or model, it is transformed on the fly in memory, while the source data remains unchanged ...
