ASTM B777 - Standards Worldwide

ASTM's leather standards are instrumental in the determination, testing, and evaluation of the various physical and chemical properties of different forms of leather. These standards help users and producers of leather goods all over the world in assessing their materials for good quality and workmanship

Microbiologically Influenced Corrosion (MIC) - NACE

1) Austenitic stainless steel with increased molybdenum content to increase resistance to corrosion compared to other 300 series alloys. Resist scaling at temperatures up to 1600 o F (871 o C). Used in industry, in marine environments and in a wide range of general industrial components. 2) Basic ferritic non-heat treatable stainless steel. Its strengths are in ductility, formability, good ...

Piping Materials & Galvanic Corrosion - Engineering ToolBox

1.3 Intended Use— Parts made from this material are intended for uses such as weights or counter-balances in static or dynamic balancing, high-speed rotating inertia members, radiation shielding, hypervelocity impact, and vibration-damping applications. In selecting the appropriate alloy for a given application, it is important to note that as the tungsten content of the alloy is increased ...

Corrosion films affect the exposed area, and reaction rates even near E_{corr} can be coverage dependent. For these reasons, instant corrosion rate determinations using PDP should be used with caution and their combination with other electrochemical and non-electrochemical techniques, e.g., EIS and hydrogen collection, is usually recommended.
