Fundamentals of Cast Film Extrusion Technology - Macro Eng

In metalworking and jewelry making, casting is a process in which a liquid metal is delivered into a mold (usually by a crucible) that contains a negative impression (i.e., a three-dimensional negative image) of the intended shape.The metal is poured into the mold through a hollow channel called a sprue.The metal and mold are then cooled, and the metal part (the casting) is extracted.

Precision Castparts Corp. - About

(Sec. 13403) The act creates a new tax credit for qualified commercial clean vehicles. The amount of the credit is the lesser of 15% of the cost of the vehicle (30% for vehicles not powered by a gasoline or diesel internal combustion engine), or (2) the cost of the vehicle in relation to a comparable vehicle.

Catholic groups say Inflation Reduction Act addresses major goals

Molding (American English) or moulding (British and Commonwealth English; see spelling differences) is the process of manufacturing by shaping liquid or pliable raw material using a rigid frame called a mold or matrix. This itself may have been made using a pattern or model of the final object. A mold or mould is a hollowed-out block that is filled with a liquid or pliable material such as ...

AarKei Tool and Die Inc

The main components of a cast extrusion line have been enumerated and described. These components do not act on their own but are integrated and governed by a computerized supervisory and control system. The main computer is the brain that couples and drives the controls of all the line components in an orchestrated way.
