This lecture is an introduction to the events in limb development. The limb has long been used as a model of how developmental patterning occurs by manipulation of the limb in animal models. This lecture will therefore also introduce some concepts and experiments that have identified patterning mechanisms within the limb.

Lecture - Limb Development - Embryology

In the course outline, give students adequate warning of the workload requirement for the simulation. This gives them a chance to opt out if their current load is already heavy. Arm students with the required content. Have them work on a position paper and an objective sheet from the initial stages.
