A heat map represents the geographic density of features on a map. Colored areas represent these points, which is useful for layers with a large number of features. To create a heat map in ArcMap, create a layer with features before using tools in either the Density toolset of the Spatial Analyst toolbox or the Mapping Clusters toolset of the Spatial Statistics toolbox.

How To: Create and apply a custom map template

About creating maps. No matter what kind of map you want to make, you begin the same way—by creating a new map document. You can either create an empty map with nothing on it or use a map template as a starting point. Map templates typically contain a predefined page layout that arranges map elements such as north arrows, scale bars, and logos, on the virtual page.

Creating Maps in ArcMap: A Quick Guide - Library

1. Choose basemap. Maps should do something meaningful, such as tell a story, present an idea, or showcase a situation. To do this, you should choose a basemap and layers that have great cartography, work at multiple scales, draw quickly, contain informative and accurate information, target a specific audience, and have visible legends if the symbology is not intuitive.

ArcGIS Desktop Help 9.2 - Creating interactive maps

When creating maps using vector data the halos shouldn't stand out, they should be the same colour as the background in order to give the illusion that the text has space around it. Using halos with colours that contrast with the background can be used to help make the text stand out, which is particularly useful when putting text labels on imagery.
