Resistance Current flows through closed circuits. Current is the amount charges that flow each second . In a wire current never changes. Current can only change if there is a junction: a split or a join. A lot of current. Very little current. More current means more electrons flowing, which is more ...

More voltage = more current.  $I = \text{Current}$  equals the voltage divided by the resistance. Resistance (in ohms [ $\Omega$ ])  $V$   $R$  Current (in amps [ $A$ ]) Voltage (in volts [ $V$ ]) Current is dependent on voltage and resistance. Current can never change voltage or current, but both voltage and resistance can change current. Ex. How much current does a 12 V
