Data Modeling is a process of formulating data in an information system in a particular structure so that it can help in easy reporting in future. It helps in analyzing data that will further help in meeting business requirements.

What Are Universal Patterns for Data Modeling? by Paul ...

A data model (or datamodel) is an abstract model that organizes elements of data and standardizes how they relate to one another and to the properties of real-world entities. For instance, a data model may specify that the data element representing a car be composed of a number of other elements which, in turn, represent the color and size of the car and define its owner.

Learning Data Modelling by Example Chapter 4) Design ...

"Universal Patterns for Data Modeling" is the third volume in The Model Resource Book series. In "Universal Patterns", authors and data modeling experts Len Silverston and Paul Agnew examine the recurring patterns that are essential for architects to understand in building and maintaining enterprise data models.
