I can calculate the unit rate for real life situations by breaking down the ratio (fractions) by dividing to solve the problem to find the relationship between two units. (7.RP.A.1) For example, if a person walks $\frac{1}{2}$ mile in each $\frac{1}{4}$ hour, compute the unit rate as the complex fraction $\frac{1}{2} / \frac{1}{4}$ miles per hour, equivalently 2 miles per hour.

Everyday Mathematics

Then, the unit shifts its focus toward decimals, relying on their work in Grade 4 of adding and subtracting decimal fractions (e.g., $3\ 10 + 4\ 100 = 30\ 100 + 4\ 100 = 34\ 100$) and their deep understanding that one can only add like units, including tenths and hundredths as those units, to add and subtract decimals (5.NBT.7).

6th Math Unit 5 Decimal Ops | Ryan Bell

In Problem 1.2, students work to develop common-sense strategies for estimating results of decimal operations. They also use their estimates to determine whether or not an answer is reasonable. Problem 1.3 addresses unit rates and their connection to ratios. Students work with decimal numbers to find and scale unit rates.
