Certain commercial dermatology products may be associated with risk for frontal fibrosing alopecia (FFA), according to study data published in the Journal of the American Academy of Dermatology. In a cohort study of Brazilian adults, FFA was associated with formalin hair straightening and regular use of facial soap and moisturizers.

Frontal fibrosing alopecia | DermNet NZ

Physical examination revealed frontal and temporal hair loss, with associated “lonely hairs,” perifollicular erythema, and scaling. Loss of eyebrow hair, depression of temporal and frontal veins, and numerous yellow papules on the forehead and temples were also noted. A clinical diagnosis of frontal fibrosing alopecia (FFA) was made.

Frontal Fibrosing Alopecia : Journal of the Dermatology ...

Frontal fibrosing alopecia is a form of scarring hair loss affecting the hair margin on the front of the scalp. This happens due to inflammation and destruction of the hair follicles. There may also be hair loss from the scalp near the ears and from the eyebrows. Sometimes hair loss can also occur from other parts of the body, but this is less ...

Frontal Fibrosing Alopecia Treatment Cape Town

DISCUSSION. Frontal fibrosing alopecia (FFA) is a form of hair loss most often seen in postmenopausal Caucasian women. In a recent multicenter review of 355 patients with FFA, 98.5% were Caucasian, 97% were women, and 86% of the women were postmenopausal (Va ñ ó -Galv á n et al., 2014). This has led some to suggest an androgen-driven cause hypothesis, but currently, the etiology is unknown.

Frontal Fibrosing Alopecia most commonly affects peri- or post-menopausal women in their 50-60s. We think that women who have undergone hysterectomies or experienced early menopause may be more susceptible to FFA, but the exact causes have not yet been proven. Frontal fibrosing alopecia can also appear in men, typically in their 40s, but as ...

Frontal Fibrosing Alopecia - Dermatology Advisor

Frontal fibrosing alopecia usually presents as a uniform linear band of hair loss along the front and sides of the scalp hair margin, resulting in a receding frontal hair line. Atypical patterns of loss include a diffuse zig-zag pattern, a pseudo-fringe- sign , or continuous involvement all the way around the hair margin both front and back.
