### lavaan: An R Package for Structural Equation Modeling

The unique centrifugal rotary design of the Rotor-Gene Q makes it the most precise and versatile real-time PCR cyclers currently available (see figure "Cross-section of the Rotor-Gene Q"). Each tube spins in a chamber of moving air, keeping all samples at precisely the same temperature during rapid thermal cycling.

Roadway Design Standards To Accommodate Low-Clearance Vehicles researchers in the social and behavioral sciences. Over the years, many software packages for structural equation modeling have been developed, both free and commercial. However, perhaps the best state-of-the-art software packages in this field are still closed-source and/or commercial. The R package lavaan has been developed to provide applied

The design can be altered and revised after the initial stages of a study, but only under stringent circumstances. As an example, pilot case studies may reveal inadequacies in the initial design or may help to articulate it. In the event of a single-case design, what was thought to be a revelatory or unique case may not turn out to be so after all.
