From the theory of regression anal- ysis it is known that S_I , (5) Therefore we shall consider S_g only as a source of LLD uncertainty. For this purpose the ratio S_y/b^{\wedge} is suitable to transform the units of S_y , i.e., the re- sponse unit, into the units of C and LLD. ... The use of design of experiments reduces the computational cost of optimization techniques to adjust contact parameters of a 3D finite element model of bolted joint. This adjustment of contact parameters allows more reliable estimations, both in contact pressure distribution and in the global joint answer, than purely a priori choices of ...

Design of Experiments (DoE) is a statistical approach to reaction and process optimization that permits the variation of different factors simultaneously with the goal to screen the reaction space for optimum values. In chemical development, DoE studies are used to speed up reaction optimization, since they allow the assessment of a large ...
