Solution #2 makes full use of the RTOS. This results in a clean design, but one that can only be used on embedded computers with ample RAM and processing resource.

Solution #3 attempts to reduce the RAM usage by changing the partitioning of functionality into tasks.

design patterns are a useful support for all designers: they are generalized solutions to commonly occurring problems, based on experience of what has worked already in the past in a large number of systems. Patterns are also appropriate to create portable code that may be reused and adapted in several applications.
