Morphology - definition of morphology by The Free Dictionary

Insect Morphology is presented for the purpose of instructing those interested in the identification of insects, particularly species with predatory or parasitic behavior. The evolutionary format used is to ease the means by which the various insect structures may be learned.

morphology | Definition & Examples | Britannica

(Redirected from Petiole (insect)) The sand wasp *Ammophila sabulosa* has an exceptionally long petiole. This *Acanthomyrmex* ant has a petiole and postpetiole. In entomology, petiole is the technical term for the narrow waist of some hymenopteran insects, especially ants, bees, and wasps in the order Apocrita.

Dictionary of Insect Morphology - Google Books

Insect morphology is the study and description of the physical form of insects. The terminology used to describe insects is similar to that used for other arthropods due to their shared evolutionary history. Three physical features separate insects from other arthropods: they have a body divided into three regions, have three pairs of legs, and mouthparts located outside of the head capsule. It is this position of the mouthparts which divides them from their closest relatives, the non-insect hex

A Dictionary of Entomology - Google Books

Insects have what is termed an "open" circulatory system. It is comprised of a dorsal vessel with a posterior "heart" and an anterior aorta. The heart pumps blood (hemolymph) forward and empties it over the brain. Blood percolates backwards. Specialized pulsating organs in some insects contribute to blood flow, including flow through wing veins.

Dictionary of insect morphology (eBook, 1999) [WorldCat.org]

Insect Morphology Principal Natural Enemy Groups Related Websites ABDOMEN - The posterior of the three principal divisions or tagmata of the insect body composed of no more than 12 metameres; functionally, the abdomen is the seat of reproduction and contains the visceral systems of digestion, elimination, respiration, circulation, storage and reproduction.

Insect Morphology and Anatomy (The Head)

Within the field of biology, morphology is the study of the shapes and arrangement of parts of organisms, in order to determine their function, their development, and how they may have been shaped by evolution. Morphology is particularly important in classifying species, since it can often reveal how closely one species is related to another.

Glossary of entomology terms - Wikipedia

Molecular Morphology is a term used in English-speaking countries for describing the structure of compound molecules, such as polymers and ribonucleic acid (RNA). Gross Morphology refers to the collective structures of an organism as a whole as a general description of the form and structure of an organism,....
