*An ordinary differential equation (ODE) is an equation containing an unknown function of one real or complex variable  $x$ , its derivatives, and some given functions of  $x$ . The unknown function is generally represented by a variable (often denoted  $y$ ), which, therefore, depends on  $x$ . Thus  $x$  is often called the independent variable of the equation. The term "ordinary" is used in contrast with the term ...*
