gate, and transistor representations; full timing calculations for all devices; and the full HDL standard.

### **Interview - FullChipDesign**

RTL Verilog. In the digital circuit design, register-transfer level (RTL) is a design abstraction which models a synchronous digital circuit in terms of the data flow between hardware register, and the logical operations performed on those signals. Register-transfer-level abstraction is used in HDL to create high-level representations of a circuit, from which lower-level representations and ...
