70 Stunning Examples of Macro and Close-Up Photography

True macro photography requires a 1:1 magnification, and you have to be able to get close enough to your subject with the right lens to achieve this. As well as a decent lens, you also need a camera that's up to the task. We take a look at 8 of the best cameras for macro photography, and what it is that makes them so good.

The 8 Best Cameras for Macro Photography (Updated for 2020 ...

The dedicated macro mode on the camera can focus as close as 0.4? or 1 cm giving you excellent close-up shots of small subjects. The rear has a viewfinder for shooting along with an LCD screen and various functional buttons.

Best Macro Photography Cameras (11 Great Cams in 2020)

In macro photography, a sharp image of a tiny object requires the lens to be positioned much closer still, with the lens moved even further out than for normal photography. As far as my investigations go, just about all compact digicams and most DSLRs have a selectable macro mode.

Photography Tips - Macro Photography - Extreme Close-up for Beginners DIY in 5 Ep 42

It is the point at which we pass from general close-up images to true macro. The term 'macro photography' is more properly applied to situations where the image size is equal to or greater than that of the subject. But it's not uncommon to see a lens with a 'Macro' label that's really just a close-up setting.

Difference Between Macro Micro and Close Up Photography ...

Macro photography (or photomacrography or macrography, and sometimes macrophotography), is extreme close-up photography, usually of very small subjects and living organisms like insects, in which the size of the subject in the photograph is greater than life size (though macrophotography technically refers to the art of making very large photographs).
