### DIN 5480 Evolventen Zahnnabenprofil - BroachTec

DIN 5480 can be confusing to those familiar with ANSI and ISO involute splines as it is based around the concept of a “Reference Diameter” with limited outcomes rather than a linear set of uniform ratios covering all tooth and Module combinations. This TechBit addresses some of those common misunderstandings and describes the basics of DIN 5480.

DIN 5482 is the older standard and is now obsolete. However, it is still commonly used particularly in the fluid flow industries. Some of the differences are: Uncommon pitches are used e.g. 1.9 module is one. Generating tools for a given pitch do not cover the full range of teeth within that pitch.

Calculation of Involute Splines to DIN 5482 WN10 software calculates dimensions and strength of a toothed shaft joint with involute flanks to DIN 5482 (Release 1950). Another application for WN10 is the calculation of self-defined non-standard splines: you can directly enter tooth tip diameters and tooth root diameters of external and internal spline, and WN10 calculates tooth height coefficients.
