Directory of Microbicides for the Protection of Materials

Microbicides are compounds that can be applied inside the vagina or rectum to protect against sexually transmitted infections (STIs) including HIV. They can be formulated as gels, creams, films, or suppositories. Microbicides may or may not have spermicidal activity (contraceptive effect). At present, an effective microbicide is not available.

Environmental Concerns in Antimicrobial Finishing of Textiles

Microbicides are products applied inside the vagina or rectum to prevent HIV transmission through sex. Most microbicides that are being tested include antiretroviral (ARV) drugs, which fight the virus. There are several types of microbicides in development and testing today.

People | Microbicide Trials Network

This book is chiefly intended for those who are using microbicides for the protection of materials. Another purpose is to inform teachers and students working on biodeterioration and to show today's technical standard to those engaged in R&D activities in the microbicide field. When trying to classify, or to subclassify, material-protecting microbicides according to their mode of action, e.g ...

WHO | Microbicides

Microbicides are experimental products containing drugs that prevent vaginal and/or rectal transmission of HIV and/or sexually transmitted infections. Researchers are studying microbicides delivered in the form of vaginal rings, gels, films, inserts and enemas. A safe, effective, desirable, and affordable microbicide against HIV could help to ...
