The first part of the volume deals with general structural and biological features of flowers and shows facets of their diversity. The second part focuses on the flowers of selected tropical plants and emphasizes their structural and biological idiosyncrasies and evolutionary features. The author also outlines new trends in the study of floral evolution and the role of flowers in the study of ...

Genetic diversity - Wikipedia

Evolutionary biology is the subfield of biology that studies the evolutionary processes (natural selection, common descent, speciation) that produced the diversity of life on Earth. In the 1930s, the discipline of evolutionary biology emerged through what Julian Huxley called the modern synthesis of understanding, from previously unrelated fields of biological research, such as genetics and ...
