Abstract: Computer scientists are joining forces with molecular biologists and chemists to explore the potential for computation using information-carrying biological polymers such as nucleic acids (DNA and RNA). DNA computing is a subset of molecular computing. The key feature of DNA for computing is its information content. The self-assembly properties of DNA suggest an indirect application ...

DNA digital data storage - Wikipedia

The use of DNA as a computing substrate also has a long history: in 1994, Adleman proposed composing Hamiltonian paths with DNA [1]. Researchers have proposed the use of DNA for Boolean circuits [26], neural networks [21], and chemical reaction networks [5]. DNA computing has also begun making inroads in the architecture community: Muscat

Abstract: DNA computer is a new type of computer which computing by biological molecular techniques. If DNA computer want to realize its practicability, it must be the same as a traditional computer. In order to settle the issues of representation and organizational in DNA computer, we need a reasonable data structures to effectively represent and organize the information of DNA computer.

The emergency of a new computing pattern must be supported by powerful mathematical theory, weak theoretical supported ideology does not have a strong vitality, and which will become vulnerable. As being a new theory, the DNA computing treated as a new computational pattern also need a lot of basic theoretical research system. This article describes the nature of DNA computing, given the ...

Abstract: The aim of this manuscript is to illustrate the current state of the art of DNA computing achievements, especially of new approaches or methods contributing to solve either theoretical or application problems. Starting with the NP-problem that Adleman solved by means of wet DNA experiment in 1994, DNA becomes one of appropriate alternatives to overcome the silicon computer limitation.
