What Is Neurofeedback? | Psychology Today

How Does Neurofeedback work for Insomnia? Sleep is a brain regulated function, and neurofeedback trains specific parts of the brain to work at an optimum frequency, in this case those associated with sleep regulation. It makes sense that neurofeedback would be a valuable therapy in the treatment of sleep disorders.

What is Neurofeedback?
Neurofeedback is direct
training of brain function,
by which the brain learns to
function more efficiently.
We observe the brain in
action from moment to
moment. We show that
information back to the
person. And we reward the
brain for changing its own
activity to more appropriate
patterns. This is a gradual
learning process.
