I recently finished repairing a Dynapath Delta 40M control on a Chevalier Falcon knee-mill and would like to share my experience so others can avoid the mistakes I made. The control showed signs of impending failure years ago. I'm told that the operator wasn't able to load a part program from the control's internal memory. Likewise, new programs wouldn't save.

The com ports on the Delta 50 are normally configured such that COM1 is al-ways designated RS-232 and COM2 is for Terminal mode (linking two controls together) but in the event of a bad line driver, receiver, etc., you can swap these two around. To do this, connect a keyboard to the control and boot it up. Press the DELETE key to enter BIOS SETUP.

SOLIDWORKS CAM & CAMWORKS POST PROCESSORS. Post processors are a critical part of any CAM system. Their basic function is to translate the toolpath you see on screen to machine-readable code (often referred to as G-code), but with the right post processor you can reduce machine cycle time, remove manual editing and provide more information to your operators for a faster setup time.

I had a Dynapath Delta 20 control which is an earlier model then the 40. I agree no rapid override was a pain in the ass. As far as the "Dynapath Language", you can program it in g-code. Just a couple mods to your post as it has a few quirks like only one G code per line(On my Delta 20, not sure about the 40).
