Nutrient cycle - Wikipedia Background Hypoxia, defined as dissolved oxygen (DO) concentrations less than 2 mg / L, has become widespread throughout estuaries and semi-enclosed seas throughout the world (Diaz 2001). While hypoxia may be permanent or intermittent, it is most commonly manifested as a seasonal disturbance, appearing in mid- to late summer after vertical stratification prevents replenishment

Section 18.4 Ecosystem ...

A tentative ecosystem theory consisting of eight basic laws has previously been presented, but it seems to be an advantage to split one of the laws into three due to some recent results, which are presented below with a few comments.. 1. All ecosystems are open systems embedded in an environment from which they receive energy (matter) input and discharge energy (matter) output.

Recycling in ecology is regulated to a large extent during the process of decomposition. Ecosystems employ biodiversity in the food webs that recycle natural materials, such as mineral nutrients, which includes water. Recycling in natural systems is one of the many ecosystem services that sustain and contribute to the well-being of human societies.
