The EN 1993-1-1:2005 requires the calculation of the torsional capacity to calculate the design ratio for clause 6.2.7(1). The implementation of the Torsional Capacity Calculation was based on SCI P057 as no other documents were available at the point of implementation. Currently, we have P385 which is not yet implemented in STAAD.Pro.

Part 1 For the beams shown, assume that EI = 150,000 kN-m, P = 100 kN, and w = 65 kN/m. Use discontinuity functions to determine (a) the reactions at B, C, and D. (b) the beam deflection at A. Assume LAB = 2.75 m, LBC = LCD = 7.00 m. ob LBC LCD Sum the forces in the y direction to find an expression that includes the reaction forces By, Cy, and D, acting on the beam.

The moment distribution method is a structural analysis method for statically indeterminate beams and frames developed by Hardy Cross.It was published in 1930 in an ASCE journal. The method only accounts for flexural effects and ignores axial and shear effects. From the 1930s until computers began to be widely used in the design and analysis of structures, the moment distribution method was ...
