Jackson 2.26 Homework Problem Solution Dr. Christopher S. Baird University of Massachusetts Lowell PROBLEM: The two-dimensional region, $0 \leq x \leq a$, $0 \leq y \leq b$, is bounded by conducting surfaces at $x = 0$, $x = a$, and $y = b$ held at zero potential, as indicated in the sketch. At large z the potential is determined by some configuration of charges and/or conductors at fixed potentials.

Introduction to Electrodynamics is a textbook by the physicist David J. Griffiths. Generally regarded as a standard undergraduate text on the subject, it began as lecture notes that have been perfected over time. Its most recent edition, the fourth, was published in 2013 by Pearson and in 2017 by Cambridge University Press. This book uses SI units (the mks convention) exclusively.***

2.1.3 The Electric Field the total force on Q is evidently E is called the Electric Field of the source charges. Physically, $E(r)$ is the force per unit charge that would be exerted on a test charge, if you were to place one at P . Notice that it is a function of position (r), because the separation vectors r depend on the location of the field point P .
