An Introduction to Basic Statistics and Probability

This book provides an introduction to elementary probability and to Bayesian statistics using de Finetti's subjectivist approach. One of the features of this approach is that it does not require the introduction of sample space – a non-intrinsic concept that makes the treatment of elementary probability unnecessarily complicate – but introduces as fundamental the concept of random numbers ...

Basic Elements of Probability Theory. 2. 1 Probability Probability is a measure or estimation of how likely it is that something will happen or that a statement is true. Probabilities are given a value between 0 (0% chance, or will not happen) and 1 (100% chance, or will certainly happen).

Elements of Probability and Statistics. The subjective evaluation of expectation and of conditional expectation is based on an economic choice of an acceptable bet or penalty. The properties of expectation and conditional expectation are derived by applying a coherence criterion that the evaluation has to follow.

ELEMENTS OF PROBABILITY THEORY. Elements of Probability Theory. † A collection of subsets of a set \mathcal{S} is called a \mathcal{F} -algebra if it contains \mathcal{S} and is closed under the operations of taking complements and countable unions of its elements. † A sub- \mathcal{F} -algebra is a collection of subsets of a \mathcal{F} -algebra which satisfies the axioms of a \mathcal{F} -algebra.

Chapter 1 INTRODUCTION. 1.1 Set Theory Digression A set is defined as any collection of objects, which are called points or elements. The biggest possible collection of points under consideration is called the space, universe, or universal set. For Probability Theory the space is called the sample space.

Notes on Probability Theory and Statistics

In probability theory, an event is a set of outcomes of an experiment (a subset of the sample space) to which a probability is assigned. A single outcome may be an element of many different events, [2] and different events in an experiment are usually not equally likely, since they may include very different groups of outcomes. [3]
