Emerging Infectious Diseases journal - CDC  
A staph infection can cause impetigo, boils, food poisoning and cellulitis. It can be deadly if it is left untreated. Since staph infections are caused by bacteria, they are treated with antibiotics. However, some strains of staphylococcus bacteria have become resistant to antibiotics. When to Seek Emergency Room Treatment for Serious Infection

Emerging Infectious Diseases | Baylor College of Medicine ...

“Emerging” infectious diseases can be defined as infections that have newly appeared in a population or have existed but are rapidly increasing in incidence or geographic range.

Emergency Response Activities for Infectious Diseases

Vaccines against viral infections have been proposed to reduce prescribing of antibiotics and thereby help control resistant bacterial infections. However, by combining published data sources, we predict that pediatric live attenuated influenza vaccination in England and Wales will not substantially reduce antibiotic consumption or adverse health outcomes associated with antibiotic resistance.

infection by ...

Emerging infectious diseases are caused by new or previously unrecognized microorganisms (Figure 1 and Table 1). Although the term became part of the journalist's lexicon in the 1990s, emerging infectious diseases have long been recognized as an important outcome of host-pathogen evolution.

Factors in the emergence of infectious diseases.

An emerging infectious disease is an infectious disease whose incidence has increased in the past 20 years and could increase in the near future. Emerging infections account for at least 12% of all human pathogens. EIDs are caused by newly identified species or strains that may have evolved from a known infection or spread to a new population or to an area undergoing ecologic transformation, or be reemerging infections, like drug resistant tuberculosis. Nosocomial infections, such as methicillin
