2.1 MENSURATION. Mensuration is the mathematical name for calculating the areas, volumes, length of sides, and other geometric parts of standard geometric shapes such as circles, spheres, polygons, prisms, cylinders, cones, etc., through the use of mathematical equations or formulas. Included here are the most frequently used and important mensuration formulas for the common geometric figures, both plane and solid.

I have one more question for you. Who remembers what very important thing had to happen before architects and engineers could build tall skyscrapers? That's right! Steel, which is stronger than wood, had to be invented. This is a great example of how an engineering development allows architects to realize their vision of amazingly tall buildings.
