Enron Modbus Protocol Abb - s2.kora.com

Enron Modbus is a modification to the standard Modicon modbus communication protocol. It was developed by Enron Corporation. The main differences between the two protocols is the numbering of the register addresses, the support of 32 bit registers as well as 16 bit, and the ability to transmit Event logs and Historical data.

Enron Modbus Protocol - ABB

The Enron Modbus protocol – developed by the Enron Corporation – has the ability to transmit operator and alarm event logs, as well as historical data through the ACM polling engine. As a high performance, flexible communication device, ACM can securely and easily configure, poll and transmit flow measurement data—storing historical data directly in its hardware.

ABB Library - G2 Flow Computers

SoftPLC Corporation adds Enron Modbus serial and ethernet drivers to their SoftPLC Programmable Automation Controllers. Enron Modbus is a modification to the standard Modbus communication protocol, used in process control devices such as chromatographs, flow computers, odorization systems, RTU's, and fire/gas alarm systems.
