Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.

Cancer - Wikipedia  
The production and quality of red bell pepper (*Capsicum annuum* L. cv. 'HA3378') fruits were evaluated in a hydroponic system in a passive-ventilated greenhouse during spring and summer 2000 in ...

Environmental Microbiology Ian L Pepper  
Ian L. Pepper, Terry J. Gentry, in *Environmental Microbiology* (Third Edition), 2015 4.4.2 Actinomycetes Actinomycetes are prokaryotic organisms that are classified as bacteria, but are unique enough to be discussed as an individual group.

1962 United States Senate election in Arkansas - Wikipedia  
The genus *Bemisia* contains 37 species and is thought to have originated from Asia (Mound and Halsey, 1978). *Bemisia tabaci*, being possibly of Indian origin (Fishpool and Burban, 1994), was described under numerous names before its morphological variability was recognised. For full synonyms, see Mound and Halsey (1978). Originally, three distinct groups of *B. tabaci* were identified by comparing ...
