Environmental Microbiology Principles Applications Jjemba

4.2 Sources. The total coliform group is composed of various genera with similar characteristics. The natural niches for members of this group range from being predominantly fecal specific, such as E. coli, to being widely distributed in the water, soil, and vegetation (Leclerc et al., 2001; Rompré et al., 2002). Many coliform bacteria are not specific to any one source and are present in both ...
