Although all of these papers help understand the analysis techniques of hybrid electric powertrains and the important design criteria, they do not provide synthesis methods to help us know how to create new designs. The first attempt to introduce PG-based hybrid electric powertrain design methodology is made by Raghavan et al. (2006).

Kinematic synthesis, on the other hand, is the process of designing a mechanism to accomplish a desired task. Here, both the type (type synthesis) as well as the dimensions (dimensional synthesis) of the new mechanism can be part of kinematic synthesis (see Chaps. 2 and 8 in this book and Chap. 3 ofVol. 2).
