Epigenetic mechanisms have been implicated to be the mediators of several functions in the nervous system such as in neuronal-glial differentiation, adult neurogenesis, the modulation of neural behavior and neural plasticity, and also in higher brain functions like cognition and memory.

Epigenetic Regulation of BDNF Other molecular events involved in the regulation of BDNF expression are those related to the epigenetic modifications. In a broad sense, epigenetics refers to the way in which chromatin structure is remodeled without affecting the sequence of nucleotides within the DNA.
