solution with a pH above 7.0. While common household lye usually refers to sodium hydroxide, the word originally referred to potash, a substance leached from hardwood ashes using water.

Balancing redox reactions in basic solution
The alkaline solution used was a mixture of an aqueous solution of sodium hydroxide 12 M and sodium silicate, with a bulk density of 1350 kg/m³ and ratio: $\text{Na}_2\text{SiO}_3/\text{NaOH}=2.5$. The sodium hydroxide solution was obtained by dissolving dried pellets of 99% purity in distilled water.
