Abstract: Drone systems have been deployed by various law enforcement agencies to monitor hostiles, spy on foreign drug cartels, conduct border control operations, etc. This paper introduces a real-time drone surveillance system to identify violent individuals in public areas. The system first uses the Feature Pyramid Network to detect humans from aerial images.

Eye in the Sky (2015) - IMDb

When outfitted with cameras and other data-gathering devices, drones provide an "eye in the sky," scouting for plant pests or dry spots that need more attention.

Eye In The Sky Drone

Eye in the Sky features two biologically-inspired micro drones—a hummingbird and a beetle—that feed video footage of the targets to the mission commander. Biologically-inspired drones like these are designed to mimic the movements of actual insects or animals by incorporating, for example, flapping wings.
