The female reproductive system functions to produce gametes and reproductive hormones, just like the male reproductive system; however, it also has the additional task of supporting the developing fetus and delivering it to the outside world. Unlike its male counterpart, the female reproductive system is located primarily inside the pelvic cavity.

The human reproductive system and the ability to reproduce make life possible. In sexual reproduction, two individuals produce offspring that have some of the genetic characteristics of both parents. The primary function of the human reproductive system is to produce sex cells. When a male and female sex cell unite, an offspring grows and develops.
