A common spot for bursitis is on the side of the hip. Here a large tendon passes over the bony bump on the side of the hip. The bony bump is called the greater trochanter. Inflammation in the bursa between the tendon and the greater trochanter is called trochanteric bursitis. This problem is common in older individuals. It may also occur in younger patients who are extremely active in ...

Bursitis is defined as inflammation of a bursa. The inflammation can be a result of friction from the overlying tendons. A bursa is mostly flattened and is filled with a thin layer of synovial fluid. It appears for example at a junction of a tendon on the bone. The iliopsoas bursa separates the muscle or tendon from bone and facilitates movement by reducing friction between the anterior hip ...
