Polyolefins are the most widely used plastics for film extrusion. A Guide To Polyolefin Film Extrusion contains general information concerning materials, methods and equipment for producing high quality polyolefin film products at optimum production rates. a broad range of chemical modifiers. Further, polyolefin-based films can be

Plastics Extrusion Technology Handbook: Sidney Levy ...

Super-extrusion is a technique in which shear stress in the die-land area is well above the critical shear rate for melt fracture. This is possible with HDPE and certain fluoropolymers (FEP and PFA types), which exhibit a second region of stable extrusion at higher shear than in the zone where melt fracture occurs (Fig. 3).

Blown film extrusion is a technology that is the most common method to make plastic W films, especially for the packaging industry. The process involves extruding a tube of molten polymer W through a die and inflating to several times its initial diameter to form a thin film bubble. This bubble is then collapsed and used as a lay-flat film or ...
