*Math 61 has two goals. One goal is
the introduction of certain basic
mathematical concepts, such as
equivalence relations, graphs, and
trees. The other goal is to introduce
non-mathematicians to abstraction and
rigor in mathematics. Finite graphs are
well-suited to this purpose. Exercises
asking for simple proofs are assigned
where appropriate.*

Lipschitzian autonomous systems. Continuity, Lipschitz continuity, and Hölder continuity of the settling-time function are studied and illustrated with several examples. Lyapunov and converse Lyapunov results involving scalar differential inequalities are given for finite-time stability. It is shown that the regularity ...

theorem is used to update the probability for a hypothesis as more evidence or information becomes available. Bayesian inference is an important technique in statistics, and especially in mathematical statistics. Bayesian updating is particularly important in the dynamic analysis of a sequence of data.

In mathematics, an integral assigns numbers to functions in a way that describes displacement, area, volume, and other concepts that arise by combining infinitesimal data. The process of finding integrals is called integration. Along with differentiation, integration is a fundamental, essential operation of calculus, and serves as a tool to solve problems in mathematics and physics involving ...
