Clause 6.4 Fire Sprinkler Installation | SCDF

2. Multipurpose fire sprinkler systems integrate with a home's plumbing system; the sprinklers are fed off of the same water source and cold-water plumbing pipes that service other fixtures in the home. Because they use the same pipes and fewer fittings and connections, the installation costs and complexity tend to be less with multipurpose systems.

GENERAL SPECIFICATION

The United States has the highest fire losses in terms of both frequency and total losses of any modern technological society. New facilities and renovation projects need to be designed to incorporate efficient, cost-effective passive and automatic fire protection systems. These systems are effective in detecting, containing, and controlling and/or extinguishing a fire event in the early stages.

Design and Installation Guide - Rehau Group

The new FPAA101 automatic fire sprinkler system designs were developed for buildings that previously did not require sprinkler protection. NCC 2019 DTS Provisions that require sprinkler systems in Class 2 and 3 buildings of 4 storeys or more and an effective height of not more than 25 m provide the option to use any of the following documents for the sprinkler system design:
