Diabetes Insipidus Essay - 732 Words | Cram

The two different sets of thought on the life cycle of the Pfiesteria is that some people believe that there are one form but the organism will go through many different stages; the other set of argument is that there are 20 different forms of the same organism. The argument that I would agree with is the second one because I think that it makes more sense.

Fish Kill Mystery by Aria Warren on Prezi

The Fish Kill Mystery In this case study, students speculate on what may have caused a major fish kill in an estuary in North Carolina. In the process, they explore how land runoff and excess nutrients affect aquatic communities, and learn about the complex life cycle of the dinoflagellate Pfiesteria .

AP Biology Labs - The Biology Corner

The term fish kill, known also as fish die-off, refers to a localized die-off of fish populations which may also be associated with more generalized mortality of aquatic life. The most common cause is reduced oxygen in the water, which in turn may be due to factors such as drought, algae bloom, overpopulation, or a sustained increase in water temperature.

The Fish Kill Mystery

This article describes one such case study, the Fish Kill Mystery, which takes place at a popular vacation spot--the beaches of North Carolina. Based on the original case from the National Center for Case Study Teaching in Science at the University at Buffalo (Kosal 2003), the authors modified the case and developed inquiry-based activities for use in the middle school classroom.
