AP Biology Labs - The Biology Corner

The term fish kill, known also as fish die-off, refers to a localized die-off of fish populations which may also be associated with more generalized mortality of aquatic life. The most common cause is reduced oxygen in the water, which in turn may be due to factors such as drought, algae bloom, overpopulation, or a sustained increase in water temperature.

Diabetes Insipidus Essay - 732 Words | Cram

The two different sets of thought on the life cycle of the Pfiesteria is that some people believe that there are one form but the organism will go through many different stages; the other set of argument is that there are 20 different forms of the same organism. The argument that I would agree with is the second one because I think that it makes more sense.
