Physics Equations for Electricity and Magnetism - dummies

Magnetism is a physical phenomenon that is propitiated by the magnetic fields. The elementary particle's magnetic moments and electric currents generate magnetic fields. The ferromagnets are greatly attracted by the magnetic fields, hence, they can be magnetized easily to permanent magnets.

The electric potential of a point is the amount of work that has to be done, per unit charge, to move a point charge from a place of zero potential to that point. This is the electric potential energy of the point divided by the charge at that point - or electric potential energy per unit charge. The di erence in electric potential between two

Magnetism Cheat Sheet Magnets exists always in dipoles North Pole (represented by N) and South Pole (represented by S). If you break the rock into pieces you get small magnets and each magnet also has two poles N and S. Same poles of the magnet like in the electricity repel each other and opposite poles attract each other.
