Life Cycle of a Shark | Sciencing

Sharks - Life Cycle. Each shark species has its own expected life span and it is difficult to set an average for sharks as a whole. However, very broadly speaking, most sharks live for between 20 and 30 years. The Spiny Dogfish lives for over a century, and some Whale Sharks have been known to do the same.

Life Cycle of Sharks - Delaware & Maryland beach.

Hammerhead sharks gestate their young for nine to 11 months, depending on the species. The female will have between four and 42 babies, called pups, which are born alive and able to care for themselves. Baby hammerheads have more rounded cephalofoils than adults, making it easier for birthing.

Animal Life Cycles

Bull Shark Reproduction A bull shark's reproductive cycle begins at the end of the summer months when male and females start mating in shallow and low salinity river mouths. The average female pregnancy cycle - gestation - runs for a time span of 10 to 12 months before she can bear the live young, and then typically producing a litter of three ...

The Life Cycle of the Red-Tailed Hawk | Sciencing

At birth a baby great white shark is already about 5 feet (1.5 meters) long; as it grows it may reach a length up to four times that. The pup (which is what a baby shark is called) will live its life at the top of the ocean's food chain. But before it grows larger, the pup must avoid predators bigger than it is—including other great white sharks.
